Art Unit: 1771

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-24, 38-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mirous et al, U.S. Patent No. 5,391,340 in view of Persson, U.S. Patent No. 5,183,622. Mirous et al discloses a method of making an embossed panel comprising a substrate and a protective coating wherein the substrate comprises wood fibers and a binder. The method comprises the steps of applying a protective coating to the substrate before the substrate is embossed. Additional coatings or layers such as paints, varnishes, shellacs, etc., may be applied above and/or below the protective layer. Mirous teaches selecting the temperature of the process so that the panel is not damaged by the pressure, but instead the resin is softened and the topcoat is not transferred to the embossing surface. The embossed panels are suitable for use as building materials and panels. Mirous et al differs from the claimed invention because Mirous et al does not teach the thicknesses of the substrate or the depth of the embossing. However, it would have been obvious to one of ordinary skill in the art to have selected the thicknesses of the substrate, the coating and the embossments depending upon the desired strength and the desired appearance of the panel. Mirous et al also differs from the claimed invention because Mirous et al does not teach that the substrate should comprise a medium density board. Persson teaches that medium density boards are particularly suitable for forming embossed building panels. Therefore, it would

Art Unit: 1771

have been obvious to one of ordinary skill in the art to have employed a medium density board as the substrate in Mirous et al because Persson teaches that such boards are particularly suitable for use in making embossed building panels.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (703) 308-0037. The examiner may be reached between 6:30 AM and 5:00 PM Monday through Thursday.

Mr. Terrel Morris, the examiner's supervisor, may be reached at (703) 308-2414.

Inquiries of a general nature may be directed to the Group Receptionist whose telephone number is (703) 308-0661.

The fax number for official faxes is (703) 872-9310. The fax number for official after final faxes is (703) 872-9311. The fax number for unofficial faxes is (703) 305-5436.
